Definitions:

Unless otherwise stipulated herein below, capitalized terms in the Product Description shall have the same meaning as defined in the [TeamViewer EULA](#).

Named User License: Under a Named User License, access to and use of the Product is limited to the specific individuals designated as Users. The right to use the TeamViewer Product is exclusively granted and bound to the Users. Group or shared logins are strictly prohibited. Re-assignment is limited to two (2) times per User per calendar year.

Add-On: Add-On refers to: (i) additional licensed items (e.g. Users, Endpoints, etc.) purchased to extend the scope of License, (ii) specific features and/or functionalities of the Product that may be activated by purchasing an additional Add-On License. Unless otherwise stipulated in the Contract, Add-On(s) will be added and co-termed to the existing Subscription License.

User: A User is a natural person first identified with a personalized login and designated by Customer to use the respective TeamViewer Product within the scope of the acquired License. Each User must at all times during the designation meet the requirements of an Authorized User in the meaning of EULA. The number of Users is subject to ordering and may be raised by order during the subscription. At least one of the Users must be designated as company administrator to manage the Users in the TeamViewer Management Console on Customer's behalf.

Endpoint: An Endpoint is an internet-capable computing device (e.g., desktops, notebooks, tablets, smartphones, workstations, servers, point-of-sale terminals, printers or handhelds; examples not exhaustive and subject to the operating system requirements) designated by Customer to use the Services under the acquired License, regardless if in the effective use or not. The number of Endpoints is limited to the Product Description and may be raised by order.

Managed Devices: A Managed Device refers to a computing device assigned to a specific TeamViewer account or company profile in the TeamViewer Management Console and centrally managed by the company administrator.

Mobile SDK (Software Development Kit): Available as Addon-License that allows Customer to use the Software Development Kit ("SDK") of TeamViewer that enables implementation of TeamViewer Product into Customer's mobile applications ("Customer Apps"). Customer is allowed to deploy such Customer Apps to its Authorized Users, provided that the Authorized Users are contractually bound to use the Customer Apps and related TeamViewer Services in compliance with the License, and Customer shall ensure that the data processing by TeamViewer with respect to the personal data of its Authorized Users is duly covered by its contractual relationship to the Authorized Users, by adding TeamViewer to its data processors list as a sub-processor of Customer, or, if necessary, obtain consent of its Authorized Users to such data processing by TeamViewer.

Integration refers to the application that integrates the respective TeamViewer Product as embedded function of a third party solution or platform and enables Customer to use the TeamViewer Product via such third party platform or solution, for which Customer also needs additional license from the third party provider.
